Paper Title

Prompting-based fake news detection framework for Bengali

Reviewer #1**Questions****1. Contribution to the research field**

Minor contribution, perhaps with the promise of more to come

2. Discussion of related work

Some references missing, or relationship to submission not clearly described

3. Writing and expression

Not well written, but could probably be made acceptable

4. Comments to Authors

1. quick spread of false information" → "rapid spread of false information"

"is expensive to obtain" → "is expensive to obtain"

"These difficulties highlight the need..." → "These findings highlight the need..."

👉 Recommendation: Proofread for subject–verb agreement, plural forms, and tense consistency (use present tense for methods and past tense for results).

2. Figures and Tables:

Figure and Table captions must be aligned and properly cited in text (e.g., "see Fig. 1" instead of "Figure 1 illustrates...").

Table 3 and 4 could use improved alignment for readability.

Equations: Use proper LaTeX formatting for mathematical notation in final version.

3. A comparison with prior benchmarks (e.g., BanFakeNews [4] baseline F1-scores).

5. Overall Score

Strongly Accept

7. Confidential comments to the editors

Reviewer #2

Questions**1. Contribution to the research field**

A clear contribution to the field

2. Discussion of related work

Covers key related work; its relation to submission is described, but could be extended further

3. Writing and expression

Well written and expressed

4. Comments to Authors

1 In short, this is an interesting manuscript and research idea.

2 The paper is concise and easy to understand. The statistics are appropriate for the study. The findings are strong.

3 The paper is well organized and well written. I could not find any substantial errors in style or grammar. The authors have posed their hypothesis well

5. Overall Score

Strongly Accept

7. Confidential comments to the editors
